authentication con ready to receive	mplete or use IP address				

Now that the network is paired and tested, lets begin pairing to our Share Folder. Select Shared Folder Setup

*This would be an example of a successful pair with user's WiFi

Begin with **1 Basic scan**, if you have trouble detecting your folder with the **1 Basic Scan**, confirm that your not on a 5GHZ network as the USB-To-WiFi is not compatible with 5GHZ routers.

Use **2** Full Scan to scan for every Device and Share Folder on your network.

Results will be printed once the USB processes the command. Highlight your desired share folder and press **3 Select** to set the folder to be paired.

After pairing to your desired folder, click **Test Share Folder** so you may confirm pairing with the Share Folder

Additional Features

Welcome! Wifi Setup Shared Folder Setup Options	Transfer Mode	
Transfer Mode	Арріу	
Help	A2 (mirror share) A3 (mirror machine) OFF	
		USBWIFI Status

Transfer mode

Here are the 3 listed methods of transfer.

- A1 will be used to share files between Machine and Folder.
- A2 Will have the USB mirror the share folder, and will not send files from the machine.
- A3 Will mirror the machine and will not send files from the share folder

Options

Detach Time refers to the amount of time the USB takes to boot up after being inserted into the USB port. The number you will enter will be in milliseconds. 9000ms would be 9 Seconds. Useful for older machines having trouble detecting the device.

03020001	
Welcome! Wifi Setup Shared Folder Setup	Options
Options Transfer Mode About Help	Disconnect Time - In milliseconds. When the stick disconnects, it will wait before reconnecting. Some machines are not compatible with a short disconnect time, and file changes will not be seen. If you have this kind of machine, try a setting of 5000 or more. This setting will make configuring the stick slower.
